

# The TWMÂ® System

The issues of cost and compliance regarding waste management have become a major concern for businesses Worldwide. In recognition of this, Entech Industries has developed a state of the art Total Waste Management Information System, "The TWMÂ® System".

The TWMÂ® System has been designed so that all waste materials, including trade waste can be tracked from the point of generation through to their final point of disposal. Shown below are some of the functions provided by the TWMÂ® System:

- Allows an organisation to report on the total quantity and cost of wastes being generated throughout the organisation
- Allows an organisation to report on the total quantity and cost of wastes being generated throughout the organisation
- Allows organisations to report on their waste management statistics in accordance with waste minimisation principals
- Allows organisations to allocate the cost of waste management back to the point of generation
- Provides waste tracking from the point of generation to the point of disposal in accordance with statutory requirements
- The system is a web application built using Microsoft .NET technologies
- Allows the organisation to customise the access of users to the modules to maintain the security of information
- All information is stored on a secure remote database
- Allows users to schedule waste management services from their computer over an internet connection
- Allows organisations to generate reports at various levels within the organisation (eg entire company, site or cost centre)
- System is supported 24 hrs per day 7 days per week.
